Although prior research has considerably documented the prevalence and correlates of academic procrastination in college students, relatively little is known about the role of longer volitional processes of goal striving, such as grit, on academic procrastination; moreover, the knowledge about direct and interactive effects of social context and personal characteristic on facilitating grit, which in turn mitigate academic procrastination, are still underexplored.

Frontiers | Peer Attachment and Academic Procrastination ...

In addition to delayed enrollment, academic procrastination, which is experienced by approximately 95% of college students (Onwuegbuzie, 2004, p. 5), is often the byproduct of course anxiety. Procrastination may be defined as a way to avoid or escape from undesirable tasks. (Gargari, Sabouri, & Norzad, 2011)

The aim of the study was to investigate to what extent gender predicts academic procrastination among gifted and talented college students. The study consisted of 35 honor college undergraduate students enrolled in a large urban university in Texas. A questionnaire packet was used for collecting data. It included a demographic data form and the Procrastination Assessment Scale-Students (PASS). The results of the t-test analysis for the total sample indicated that, gender was not a significant predictor of academic procrastination among gifted and talented students. Implications of the findings were discussed and some suggestions were made for further research.

The purpose of this study was three folds: to explore whether there were relationship between academic procrastination and positive and negative self-oriented perfectionism of college students with learning disabilities, the extent to which positive and negative self-oriented perfectionism of college students with learning disabilities predicts academic procrastination, and whether level of academic procrastination tendency among college students with learning disabilities differs according to demographic variables. The research is based on a convenience sample of 80 undergraduate students from a variety of departments at Zagazig Faculty of Education, Egypt. Findings indicated that there was a positive correlation between academic procrastination and Positive Self-Oriented Perfectionism, while no significant correlation was determined between academic procrastination and Negative Self-Oriented Perfectionism. According to the multiple linear regression analysis results, Positive Self-Oriented Perfectionism, and Negative Self-Oriented Perfectionism account for 22% of academic procrastination. Positive Self-Oriented Perfectionism made a positive contribution to the model, Negative Self-Oriented Perfectionism made no significant contribution, which indicated that the only significant predictor was Positive Self-Oriented

Perfectionism. The independent t-test showed that undergraduates' academic procrastination scores did not differ significantly according to gender. One-way ANOVA showed that undergraduates' academic procrastination scores did not differ significantly according to grade. The independent t-test showed that undergraduates' academic procrastination scores did not differ significantly according to Specialty.

Physical activity and academic procrastination are two common behaviors many college students maintain and control. This study examined the relationship between students' reported physical activity and academic procrastination. In addition, the study examined the relationships between intrinsic motivation for physical activity and engagement in physical activity and also intrinsic motivation for academic work and academic procrastination. A total of 115 undergraduate college students completed an electronic survey. Correlational analyses were conducted to determine the relationship between physical activity and academic procrastination. Results indicated that individuals who reported engaging in more physical activity tended to be less likely to report engaging in academic procrastination. Individuals who reported higher levels of intrinsic motivation for physical activity tended to report engaging in more physical activity. Also, individuals who reported higher levels of intrinsic motivation for academic work tended to report engaging in less academic procrastination. Independent samples t-tests were conducted to determine gender differences in physical activity and academic procrastination. Males and females did not differ in amount of physical activity or academic procrastination.
