Honeysuckle Creek reveals the pivotal role that the tracking station at Honeysuckle Creek, near Canberra, played in the first moon landing. Andrew Tink gives a gripping account of the role of its director Tom Reid and his colleagues in transmitting some of the most-watched images in human history as Neil Armstrong took his first step. Part biography and part personal history, this book makes a significant contribution to Australia ' s role in space exploration and reveals a story little known until now. As Christopher Columbus Kraft Jr, the director of flight operations for Apollo 11, acknowledged: ' The name Honeysuckle Creek and the excellence which is implied by that name will always be remembered and recorded in the annals of manned space flight ' . 'A wonderful and inspirational story, beautifully told. As hard as it is to do this extraordinary yarn justice, Andrew Tink has done it.' — Peter FitzSimons

Recently, great attention has been paid to materials that can be used in the human body to prepare parts that replace failed bone structures. Of all materials, Ti-based materials are the most desirable, because

they provide an optimum combination of mechanical, chemical, and biological properties. The successful application of Ti biomaterials has been confirmed mainly in dentistry, orthopedics, and traumatology. Titanium biocompatibility is practically the highest of all metallic biomaterials; however, new solutions are being sought to continuously improve their biocompatibility and osseointegration. Thus, the chemical modification of Ti results in the formation of new alloys or composites, which provide new perspectives for Ti biomaterials applications. This book covers broad aspects of Ti-based biomaterials concerning the design of their structure, mechanical, and biological properties. This book demonstrates that the new Ti-based compounds and their surface treatment provide the best properties for biomedical applications.
