This Dictionary analyses the ways in which the statuses of European citizens are profoundly affected by EU law. The study of one's particular status (as a worker, consumer, family member, citizen, etc.) helps to reconsider the legal notions concerning an individual's status at the EU level. The Dictionary includes a foreword by Evgeni Tanchev, Advocate General at the Court of Justice of the European Union, which illustrates some interesting features of the Court's case law on statuses. The Dictionary's core is composed of 79 chapters, published in alphabetical order. Each brief chapter analyses how the individual status was conditioned or created by contemporary EU law, or how the process of European integration modified the traditional juridical definition of the respective status. The Dictionary provides answers to the following questions: Has the process of European integration modified the traditional juridical definition of individual status? Has the concept of legal status now acquired a new function? What role has EU law played in developing a new modern function for the concept of individual status? Are the selection of a specific individual status by EU law and the proliferation of such statuses, which is synonymous with the creation of new privileges, collectively undermining the goal of achieving substantive equality between EU citizens? Does this constitute a return to the past? Under EU law, is it possible to create a uniform definition of the legal status of the person, over and above the definition that is provided by a given Member State's legal system?

In International Aid under the Microscope: European Union Project Cycle Management in Jamaica, Shinique Walters critically analyses the discourse surrounding the European Union's project management guidelines and their role in the development, conceptualization, management and implementation of social development projects administered in Jamaica. Walters looks at the communities engaged under the Jamaica Social Investment Fund Poverty Reduction Programme II and explores the role of the European Union and its impact on aid dependency as well as the role of environmental and social factors in achieving project success. She determines that leadership, capacity building, and individual and community development are important approaches that need to be examined to encourage development and must be seen as a part of the development script. Moreover, it is the responsibility of donors to ensure that they provide the necessary tools and support to build capacity. This work will be of interest to academics, public-policy practitioners, development specialists, and government and non-governmental agencies involved with community-based interventions and social development.

The development of the Agile Movement, whatever the area ofapplication or discipline, comes from the famous "faster,cheaper, better" maxim. As such, the agile manufacturing paradigmrests on four principles: response to change and uncertainty,supplying highly customized products, synthesis of diversetechnologies, and intra-enterprise and inter-enterpriseintegration. For the reader interested in agile project management applications,response to changes, and transformations and its impact on managingprojects, this book is a must-read. Various insights are covered,including: how to master complexity and changes in projects, economy, andsociety; how interaction between the project management team and projectowners can influence risk management; how to move beyond the traditional mechanistic projectmanagement approach; how to include agile principles into an improved LogicalFramework Analysis structure; what the impact is of agile principles on projectmanagement organizations what kind of innovative project management practice supportsagile principles; and much more.

The techniques and methods of project appraisal in developing countries have been considerably expanded and refined since they were first introduced in the late 1960s. This up-to-date and authoritative survey volume demonstrates the ways in which cost-benefit analysis has developed in response to changes in economic circumstances and conditions over the past three decades. An international group of academic and professional economists covers areas including problems in the practical application of cost-benefit techniques by international agencies, the treatment of income distribution, discounting, the effects method, the logical framework as a complement to project appraisal, aid tying, risk criteria in decision making, benefit valuation in the water sector, the appraisal of technical assistance projects, privatization in transition economies and shadow pricing in transition economies. Professor Kirkpatrick and Professor Weiss have prepared an insightful overview essay introducing the broad selection of work presented in this volume.
