Matrix Structural Analysis By: Dr. Pramod K. Singh Matrix structural analysis is a very elementary and useful subject, which is a stepping stone towards understanding more advanced subjects such as detailed finite element analysis, structural dynamics, and stability of structures. In the present day context, where use of computers for analysis of structures having ever-increasing complexity and size is mandatory, knowledge of this subject is essential even at undergraduate level. Study of the subject, not only clarifies structural analysis concepts, but it is also helpful in understanding of the unified analysis and design softwares like STAAD.Pro, SAP etc. Key Features • Presents the unified approach of analysis for all types of skeletal structures. • Concept of degree(s) of freedom is used in the solutions. • The following web link can be used to download the soft copy of FORTRAN-90 program, its application file, data file and other supporting files. drive.google.com/open?id=1WBhAeAUBr-kWY7STCZzV41Ysxl0hbgH5 • Computer solutions of the 5 examples on direct stiffness matrix method, and 30 other solved examples are also given in the web link for ready reference.
